Overview

A leading retail company seeks to gain a deeper understanding of its customers' shopping behavior in order to enhance sales performance, improve customer satisfaction, and foster long-term customer loyalty. The management team has identified notable shifts in purchasing patterns across various demographics, product categories, and shopping channels. They are particularly focused on identifying the key factors such as discount usage, product reviews, seasonal trends, and payment preferences that influence consumer decisions and drive repeat purchases.

Business Question

"How can the company leverage consumer shopping data to identify behavioral trends, strengthen customer engagement, and optimize its marketing and product strategies?"

Deliverables

1. Data Preparation & Modeling (Python)

Clean, transform, and prepare the raw customer dataset for structured analysis.

2. Data Analysis (SQL)

Organize data into a relational database using MySQL, simulate business transactions, and execute queries to extract insights on customer segments, loyalty patterns, and key purchase drivers.

3. Visualization & Insights (Power BI)

Develop an interactive dashboard that highlights key trends and patterns, enabling stakeholders to make informed, data-driven decisions.

4. Report & Presentation

Prepare a comprehensive project report summarizing findings and business recommendations, along with a presentation communicating actionable insights to stakeholders.

5. GitHub Repository

Maintain a well-structured repository containing all Python scripts, SQL queries, and Power BI dashboard files.
